

# Chemicals Requiring Designated Areas

**CAUTION**

CARCINOGENS  
REPRODUCTIVE TOXINS  
or OTHER EXTREMELY  
TOXIC CHEMICALS

The OSHA Laboratory Standard [29 CFR 1910.1450](#) mandates that an employer's Chemical Hygiene Plan will provide for establishment of **designated areas** "which may be used for work with 'select carcinogens,' reproductive toxins or substances which have a high degree of acute toxicity. A designated area may be the entire laboratory, an area of a laboratory or a device such as a laboratory hood."

The sticker shown here (available from REM) is to be used to designate areas for use of the following select carcinogens, reproductive hazards, and/or substances having a high degree of acute toxicity. Affix one or more stickers at all work and storage locations associated with these materials. If you store but are not using one or more of these materials, please sticker the storage area, and if the material is stored in a work area, designate a work area in that room as well. (The simple existence of the material in a work room implies the likelihood of its being used at some time.)

**NOTE:** Designating an entire room by placing this sticker at the entrance will simplify this necessity, and will also prohibit all eating, drinking, and storage or preparation of food or beverages anywhere in the room (if such are not already prohibited for other reasons).

## Select carcinogens, reproductive hazards, and substances having a high degree of acute toxicity.
